

Website Update Summary

Improvements and new features delivered to Sunflour Bakery · October 2026

Our work doesn't stop at launch. After listening to how your team uses the website day to day, we made four improvements that make running the business easier and give your customers a better experience. All are live now.

ORDERS & PAYMENTS

1 Cancelled orders no longer show "Unpaid"

Before: a cancelled order's invoice stayed marked unpaid in the admin portal.

Now: when an order is cancelled or rejected, its payment is automatically marked **Cancelled**, and the invoice reflects it. Past cancelled orders were corrected too. Payments you already confirmed are never changed.

MENU

2 Upload and update your menu images

Before: only the table-style menu could be edited.

Now: a new **Menu boards** page lets you upload as many menu images as you need, rename, reorder, hide or replace them whenever prices change. Your main menu shows full width on phones, with the others beneath it. Customers can tap any menu to zoom in. Your four current menus are already loaded.

ADMIN PORTAL

3 Faster, easier product editing

Before: one long page, with a single Save button at the very bottom.

Now: every product starts collapsed. Tap the **pen icon** to edit it, then use **Save**, **Cancel** or **Delete** right there. No more scrolling past dozens of products, and one product's changes can't accidentally affect another.

STOREFRONT

4 A more polished promotion banner

Before: the banner touched both edges of the screen.

Now: the homepage promotion carousel has rounded corners, a soft shadow and comfortable spacing from the screen edge, giving the page a cleaner, more professional look on every device.

We're still here for you

These updates came directly from your feedback, and that's how we'll keep working together. As Sunflour Bakery grows, we're available to help with:

- New features and seasonal promotions as your needs change
- Training your team on the admin portal and answering day-to-day questions
- Monitoring, maintenance and quick fixes so the website stays fast and reliable
